

# changelog.md for @apiclient.xyz/gitea

## 2026-03-02 - 1.5.0 - feat(gitea)

add domain model classes, helpers, and refactor GiteaClient internals; expand README with usage and docs

- Introduce domain classes: GiteaOrganization, GiteaRepository, GiteaActionRun, GiteaActionRunJob (+steps), GiteaBranch, GiteaTag, GiteaSecret
- Add helper utilities: autoPaginate, computeDuration, resolveGiteaStatus, extractRefFromPath, extractWorkflowIdFromPath, toGiteaApiStatus
- Refactor GiteaClient: consolidate low-level request helpers, add internal request\* methods for action-run/job endpoints, requestText/requestBinary support, and PATCH support
- Update raw API interfaces (IGiteaActionRun, IGiteaRepository, IGiteaOrganization, IGiteaUser) to match Gitea 1.25 shapes
- Export new domain classes, helpers and commit info from ts/index.ts
- Revise README: Quick Start, class/method documentation, license and company info

## 2026-03-02 - 1.4.0 - feat(gitea)

add Actions API support: list filters, run/job endpoints, dispatch, and richer types

- Introduce IActionRunListOptions to allow filtering action runs by status, branch, event, and actor
- Update getActionRuns to accept filtering options and build URL query parameters
- Add new client methods: getActionRun, getJobLog, rerunAction, cancelAction, and dispatchWorkflow
- Expand IGiteaActionRun and IGiteaActionRunJob shapes and add IGiteaActionRunJobStep for more detailed run/job metadata
- Export new types (IActionRunListOptions, IGiteaActionRunJobStep) from the package index

# 2026-03-02 - 1.3.0 - feat(gitea)

add repository branches and tags support: new IGiteaBranch/IGiteaTag interfaces and getRepoBranches/getRepoTags client methods

- Added IGiteaBranch and IGiteaTag interfaces (ts/gitea.interfaces.ts).
- Added getRepoBranches and getRepoTags methods with pagination support to Gitea client (ts/gitea.classes.giteaclient.ts).
- Exported the new interfaces from the package index (ts/index.ts).

# 2026-02-28 - 1.2.0 - feat(giteaclient)

add deleteRepo method to delete a repository via Gitea API

- Implements deleteRepo(owner: string, repo: string): Promise
- Uses DELETE /api/v1/repos/{owner}/{repo} and encodes owner and repo with encodeURIComponent

# 2026-02-28 - 1.1.0 - feat(orgs)

add organization and organization-repository APIs: getOrg, getOrgRepos, createOrg, createOrgRepo

- Added getOrg(orgName): fetch a single organization by name
- Added getOrgRepos(orgName, opts?): list repositories in an organization with pagination, sorting by updated, and optional search query
- Added createOrg(name, opts?): create a new organization with fullName, description, and visibility (defaults to public)
- Added createOrgRepo(orgName, name, opts?): create a repository within an organization; description optional and private defaults to true
- Endpoints use encodeURIComponent for orgName in URLs to ensure safe requests

# 2026-02-24 - 1.0.3 - fix(gitea)

no changes detected in the diff; no code or doc updates

- No files changed in this commit (empty diff).
- Current package version in package.json is 1.0.2; no version bump required.

## 2026-02-24 - 1.0.2 - fix()

no code changes to commit — repository unchanged

- No files were modified according to the provided diff.
- No version bump is required; keep current version.

## 2026-02-24 - 1.0.1 - fix(repo)

no changes

- No files changed in the provided diff; no code or dependency updates to release.

## 2026-02-24 - 1.0.0 - core

Initial release of the @apiclient.xyz/gitea TypeScript client and packaging/publishing fix.

- Initial implementation of @apiclient.xyz/gitea TypeScript client (GiteaClient).
- Provides methods for repositories, organizations, secrets, and action runs.
- fix(core): add npm release registry configuration to ensure correct publishing.
