

changelog.md for @design.estate/dees- domtools

2026-03-27 - 2.5.4 - fix(build)

remove npm bundling from build script and align documented jwt default state

- Updates the build script to run tsbundle without the npm target
- Bumps @git.zone/tstest from ^3.6.1 to ^3.6.3
- Corrects the README example to show an empty string as the default jwt value

2026-03-27 - 2.5.3 - fix(tsconfig)

add Node.js type definitions to TypeScript compiler options

- Includes the node type library in tsconfig to improve recognition of Node.js globals and APIs during type checking.

2026-03-27 - 2.5.2 - fix(build,types)

migrate smart config filename and tighten TypeScript null handling

- rename npmextra.json to .smartconfig.json and update the published files list
- update build and test tool dependencies and enable logfile output for tests

- fix TypeScript compatibility by allowing nullable DOM references, casting keyboard event listeners, and guarding optional scroll durations

2026-03-11 - 2.5.1 - fix(breakpoints)

rename exported functions to reflect constraint-based API: `cssForCustom` -> `cssForConstraint` and `cssForCustomContainer` -> `cssForConstraintContainer`; update README usage

- Renamed `cssForCustom` to `cssForConstraint`
- Renamed `cssForCustomContainer` to `cssForConstraintContainer`
- Updated README examples to use new names
- Function behavior and signatures unchanged; only exported names and internal comment updated
- Consumers must update imports/usages to the new function names (breaking change)

2026-03-11 - 2.5.0 - feat(breakpoints)

document preset viewport helpers, low-level container helpers, and exported types for breakpoints

- Added documentation for preset viewport helpers (they emit both `@media` and `@container` `wccToolsViewport`)
- Added usage examples and API for low-level helpers: `cssForCustom`, `cssForContainer`, `cssForCustomContainer`, and `containerContextStyles`
- Documented exported types: `ICssForConstraints` and `TViewport`
- Clarified that component-level container helpers target named containers and do not emit `@media` fallbacks

2026-03-11 - 2.4.0 - feat(css.breakpoints)

add constraint-based CSS breakpoint helpers and container context utilities

- Introduce constraint-based API: ICssForConstraints and buildCondition for composing min/max width conditions
- Add cssForViewport and cssForContainer helpers to centralize @container and @media generation
- Add curried factories cssForCustom and cssForCustomContainer for reusable custom constraint styles
- Add containerContextStyles to generate container-name/type host styles used with container queries
- Refactor existing presets (cssForDesktop, cssForNotebook, cssForTablet, cssForPhablet, cssForPhone) to delegate to the new helpers while preserving behaviour
- Import css from 'lit' (in addition to CSSResult and unsafeCSS) to support the new containerContextStyles factory

2026-03-05 - 2.3.9 - fix(deps)

bump dependency and devDependency versions, update lik import paths, add tsbundle config, export test start, and tidy readme install snippet

- Bumped several devDependencies and dependencies (e.g. @git.zone/tsbuild, @git.zone/tsbundle, @git.zone/tstest, @api.global/typedrequest, @push.rocks/* packages including smartjson and webrequest).
- Updated @push.rocks/lik import paths to use classes.* modules (classes.objectmap/stringmap/fastmap).
- Added @git.zone/tsbundle entry to npmextra.json to produce an esbuild bundle (dist_bundle/bundle.js).
- Changed test bootstrap to export default tap.start() to align with test runner usage.
- Fixed README installation snippet formatting (combined npm/pnpm examples).

2026-01-27 - 2.3.8 - fix(domtools)

remove default 'loading...' meta title in WebSetup and use an empty string as the default

- ts/domtools.classes.domtools.ts: changed WebSetup.metaObject.title from 'loading...' to '' to avoid displaying a placeholder title

2026-01-04 - 2.3.7 - fix(deps)

bump dependencies, update build/test configuration, and reorganize npmextra configuration

- Update devDependencies: @git.zone/tsbuild to ^4.0.2, @git.zone/tsbundle to ^2.6.3, @git.zone/tstest to ^3.1.4, @types/node to ^25.0.3
- Update dependencies: @api.global/typedrequest to ^3.2.5, @design.estate/dees-comms to ^1.0.30, lit to ^3.3.2
- Replace import of 'lenis' with '@tempfix/lenis' (^1.3.17) and update ts import
- Change test script to use --verbose and move browser test file to test.chromium.ts
- Remove experimentalDecorators and useDefineForClassFields from tsconfig.json
- Rework npmextra.json: migrate keys to scoped entries (@git.zone/cli, @git.zone/tsdoc), add release registries and accessLevel, add @ship.zone/szci and include tsdoc legal text

2025-11-16 - 2.3.6 - fix(readme)

Normalize README formatting and improve breakpoint helpers section

- Fixed inconsistent Markdown list formatting in the Features section (added space after list dash for emoji bullets)
- Bolded the "Available breakpoint helpers" heading and added spacing for improved readability
- Clarified breakpoint helper listing to ensure cssForPhone is documented

2025-11-16 - 2.3.5 - fix(dependencies)

bump dependency versions in package.json

- Updated devDependencies:
 - ○ @git.zone/tsbuild: ^2.6.4 -> ^2.7.1
 - ○ @git.zone/tsbundle: ^2.4.0 -> ^2.5.1
 - ○ @git.zone/tstest: ^2.3.1 -> ^2.7.0
- Updated dependencies:
 - ○ @push.rocks/smartjson: ^5.0.20 -> ^5.2.0
 - ○ @push.rocks/smartrouter: ^1.3.2 -> ^1.3.3
 - ○ @push.rocks/smartstate: ^2.0.20 -> ^2.0.27
 - ○ @push.rocks/smartstring: ^4.0.15 -> ^4.1.0

2025-11-16 - 2.3.4 - fix(domtools)

Prevent race conditions during DomTools initialization and improve runOnce error handling

- Add a static initializationPromise to serialize and await concurrent DomTools.setupDomTools() calls to avoid race conditions when multiple initializations are requested.
- Initialize Keyboard only after the document is ready (check document.readyState and use readystatechange listener) so document.body/head are available before creating the Keyboard instance; resolve domReady and domToolsReady appropriately.
- Support ignoreGlobal path to create isolated DomTools instances while keeping global initialization guarded by initializationPromise.
- Enhance runOnce: store errors from the first execution and re-throw them to all waiting callers; always clear the running flag in a finally block to prevent permanent stuck state.

2025-06-20 - 2.3.3 - fix(package.json)

Update dependency versions and add pnpm package manager field

- Update @git.zone/tsbuild from ^2.2.1 to ^2.6.4
- Update @git.zone/tsbundle from ^2.2.5 to ^2.4.0
- Update @git.zone/tstest from ^1.0.96 to ^2.3.1
- Update @push.rocks/tapbundle from ^5.5.6 to ^6.0.3
- Update @push.rocks/lik from ^6.1.0 to ^6.2.2
- Update @push.rocks/smartpromise from ^4.2.2 to ^4.2.3
- Update @push.rocks/smartrx from ^3.0.7 to ^3.0.10
- Update @push.rocks/smartstate from ^2.0.19 to ^2.0.20
- Update lenis from ^1.1.20 to ^1.3.4
- Update lit from ^3.2.1 to ^3.3.0
- Add packageManager field for pnpm

2025-02-01 - 2.3.2 - fix(scroller)

Rename method from scrollToElement to toElement for consistency

- Updated method name in Scroller class for better coherence with existing naming conventions.

2025-01-31 - 2.3.1 - fix(scroller)

Removed passive option from scroll event listener

- The 'passive: true' option was removed from the native scroll event listener attachment.

2025-01-31 - 2.3.0 - feat(scroller)

Enhance Scroller class with callback execution and adaptive scroll listener

- Added support for executing scroll callbacks in the Scroller class.
- Integrated adaptive scrolling mechanism using Lenis, with native smooth scrolling detection.
- Ensured seamless switching between native scroll listener and Lenis scroll listener.

2025-01-31 - 2.2.0 - feat(core)

Enhance scrolling capabilities by integrating Scroller class and adding lenis support

- Replaced SweetScroll setup in domtools.classes.domtools.ts with Scroller class.
- Moved SweetScroll initialization and methods to new Scroller class.
- Added lenis support in the Scroller class for enhanced scrolling capabilities.
- Updated dev and dependencies versions in package.json.

2025-01-09 - 2.1.1 - fix(themamanager)

Fixed automatic global theme change subscription for background updates.

- Corrected the logic for updating the document's background color upon theme changes using themeObservable subscription.

2025-01-09 - 2.1.0 - feat(themeManager)

Exposed method to enable automatic global theme change.

- Enable easier application of dark and bright themes by exposing a method.
- Updated devDependencies and dependencies in package.json to latest versions.

2024-10-21 - 2.0.65 - fix(ThemeManager)

Refactor ThemeManager class to separate global style setting logic

- Moved logic to set global styles into a dedicated function setGlobalStylesOnPurpose in ThemeManager.

2024-10-06 - 2.0.64 - fix(pluginexports)

Add missing import for smartrouter in pluginexports.

- Fixed a missing import for smartrouter in ts/domtools.pluginexports.ts.

2024-10-06 - 2.0.63 - fix(dependencies)

Update @push.rocks/smartrouter to version ^1.3.2 for better compatibility

- Updated @push.rocks/smartrouter from version ^1.2.1 to ^1.3.2 in package.json.

2024-10-06 - 2.0.62 - fix(dependencies)

Update dependencies to resolve potential issues and improve stability

2024-10-04 - 2.0.61 - fix(core)

Correct import statement for SweetScroll.

- Fix import syntax for SweetScroll in domtools.pluginexports.ts

2024-10-02 - 2.0.60 - fix(dependencies)

Update dependencies to latest versions

- Bump @git.zone/tsbuild version from 2.1.82 to 2.1.84
- Bump @push.rocks/tapbundle version from 5.0.23 to 5.3.0
- Bump @types/node version from 20.14.9 to 22.7.4
- Bump @api.global/typedrequest version from 3.0.30 to 3.0.32
- Bump @push.rocks/smartstate version from 2.0.17 to 2.0.18
- Bump lit version from 3.1.4 to 3.2.0

2024-10-02 - 2.0.59 - fix(core)

Refactor plugin exports to improve modularity

- Refactored the plugin exports to be more modular and organized.
- Replaced redundant plugin object definition in ts/index.ts with a simpler import and export pattern.

2024-07-01 - 2.0.58 - fix(dependencies)

Update dependencies and correct font family in styles

- Updated @git.zone/tsbuild to ^2.1.82
- Updated @git.zone/tstest to ^1.0.90
- Updated @push.rocks/tapbundle to ^5.0.23
- Updated @types/node to ^20.14.9
- Updated @api.global/typedrequest to ^3.0.30
- Updated @design.estate/dees-comms to ^1.0.27
- Updated @push.rocks/lik to ^6.0.15
- Updated @push.rocks/smartjson to ^5.0.20
- Updated @push.rocks/smartpromise to ^4.0.4
- Updated @push.rocks/webrequest to ^3.0.37
- Updated @push.rocks/webstore to ^2.0.20
- Updated lit to ^3.1.4
- Updated default font family to 'Geist Sans', 'Inter', sans-serif

2024-04-20 - 2.0.57 - Documentation
