Integrating `@design.estate/dees-editor` in Your Project

First, ensure you have installed `@design.estate/dees-editor` as described in the installation section.

Setting Up Your Project

Create a TypeScript file (e.g. `app.ts`) and import necessary functionalities using ESM syntax:

```
import { DeesEditor, DeesTerminal, DeesEditorMarkdown, DeesEditorMarkdownOutlet } from
 '@design.estate/dees-editor';
```

Displaying the Markdown Editor

To display the markdown editor in your web application, you will need to incorporate it into your HTML structure. Typically, you can use custom element tags provided by the library. Here's a simple example:

HTML Structure

Add the following HTML structure to your application's main HTML file (e.g., `index.html`):

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Markdown Editor</title>
  <script type="module" src="./app.ts"></script>
</head>
<body>
  <dees-editor></dees-editor>
</body>
</html>
```

Initializing the Editor

Within your `app.ts` file, initialize the markdown editor with desired options:

```
const editorElement = document.querySelector('dees-editor');
if (editorElement) {
  editorElement.language = 'markdown'; // Set the language to markdown
  editorElement.content = '# Markdown Editor\n\nStart typing your markdown content here...';
  // Initial content
}
```

Advanced Usage

`@design.estate/dees-editor` offers an advanced markdown editor that leverages the Monaco Editor. This means you can utilize Monaco's extensive API for further customization and functionality enhancement.

Configuring the Editor

The editor can be tailored to meet your needs, such as theming, read-only mode, and more. Explore Monaco's [IStandaloneEditorConstructionOptions](#) for all available configurations.

Example - Setting Dark Theme and Read-Only Mode:

```
(async () => {
  const editorInstance = await editorElement.editorDeferred.promise; // Wait for the editor
  to initialize
  editorInstance.updateOptions({
    theme: 'vs-dark', // Set theme to dark
    readOnly: true // Make the editor read-only
  });
})();
```

Integrating Terminal Emulator

[@design.estate/dees-editor](#) also includes a powerful terminal emulator, [DeesTerminal](#), which can be embedded alongside your editor:

```
<dees-terminal></dees-terminal>
```

And in your TypeScript file:

```
const terminalElement = document.querySelector('dees-terminal');
if (terminalElement) {
  // Initialize terminal with options or use it directly
}
```

Creating a Live Markdown Preview

[@design.estate/dees-editor](#) facilitates creating live markdown previews. Utilize [DeesEditorMarkdown](#) for binding the editor with a live preview outlet.

```
<dees-editormarkdown></dees-editormarkdown>
```

This component divides the viewport into an editor pane and a live preview pane. As you type in the editor, the markdown content automatically renders in the live preview.
