

# docs/examples.md for @git.zone/tscoverage

---

name: Examples

## Examples

modules that use npmts in their development workflow

Module Name	Description
<a href="#">gitzone</a>	fast npm module prototyping
<a href="#">gulp-browser</a>	browserify for gulp
<a href="#">npmdocker</a>	dockerized npm development
<a href="#">smartcli</a>	easy cli tool creation

“ There are tons more... We will add them here over time.

## Tips and tricks:

- Use [npmts-g](#) to use globally installed npmts and install npmts locally if no global npmts is available.
- Use [nmpage](#) to create a webpage from coverage reports and TypeDoc for the module
- Use [hosttoday/ht-docker-node:npmci](#) for speedy CI builds
- Use [npmdocker](#) for running tests consistently with docker.
