Material for MkDocs

Create beautiful project documentation

Material is a theme for [MkDocs](#), an excellent static site generator geared towards project documentation. It is built using Google's [Material Design](#) guidelines.

[Material for MkDocs](#)

Quick start

Install the latest version of Material with `pip`:

```
pip install mkdocs-material
```

Append the following line to your project's `mkdocs.yml`:

```
theme:  
  name: 'material'
```

What to expect

- Responsive design and fluid layout for all kinds of screens and devices, designed to serve your project documentation in a user-friendly way in 36 languages with optimal readability.
- Easily customizable primary and accent color, fonts, favicon and logo; straight forward localization through theme extension; integrated with Google Analytics, Disqus and GitHub.
- Well-designed search interface accessible through hotkeys (F or S), intelligent grouping of search results, search term highlighting and lazy loading.

For detailed instructions see the [getting started guide](#).
