

changelog.md for @push.rocks/levelcache

2025-08-28 - 3.2.0 - feat(docs)

Expand README with detailed usage/examples, update test runner and test script, and pin/bump dependencies

- Completely overhauled README: added highlights, Quick Start, advanced configuration, core operations, examples, storage tier explanations, performance tips, and API reference.
- Updated tests to use @git.zone/tstest/tapbundle (test import changed) and adjusted package.json test script to run with --verbose --logfile --timeout 60.
- Bumped/pinned dependencies: @push.rocks/smartcache -> ^1.0.18 and several packages now have explicit version ranges (e.g. @push.rocks/lik -> ^6.2.2).
- Removed devDependency on @push.rocks/tapbundle.

2025-08-28 - 3.1.2 - fix(core)

Update CI workflows and dependencies; apply small bugfixes and formatting improvements

- Update Gitea workflow image URL and computed repo URL to internal registry and simplified repo path
- Switch npmci install target from @shipzone/npmci to @ship.zone/npmci in CI scripts
- Bump devDependencies and dependencies to newer versions (tsbuild, tstest, tapbundle, lik, smartbucket, smartfile, smartpath, smartpromise, taskbuffer, tsclass, etc.)
- Add package metadata: homepage anchor, packageManager, bugs URL and pnpm overrides block
- Fix TypeScript formatting and signatures (consistent trailing commas, multiline parameter lists, path join argument formatting)
- Fix file system and S3 manager calls to ensure consistent path handling and argument formatting (improved encoding/consistency in disk and S3 managers)
- Correct test file syntax (object commas) to avoid runtime/parse issues
- Update .gitignore to add AI tool folders and reorganize custom section
- Add pnpm-workspace.yaml with onlyBuiltDependencies entry

2024-11-26 - 3.1.1 - fix(core)

Fix S3 cache manager methods for better path encoding consistency

- Corrected path parameter usage in S3 manager methods to ensure encoding and consistency.
- Updated package.json Git dependencies for scoped packages.

2024-11-24 - 3.1.0 - feat(core)

Enhanced caching solution with optional configurations and improved documentation.

- Improved package description and keywords for better discoverability.
- Updated dependencies to latest versions.
- Added strict type checking in TypeScript configurations.
- Enhanced README with detailed usage instructions and examples.

2024-05-29 to 2024-02-14 - 3.0.8

Minor configuration updates and documentation changes.

- Updated project description.
- Modified tsconfig setup.
- Adjustments to npmextra.json regarding githost.

2024-02-14 - 3.0.7

Core enhancements and bug fixes.

- Fixed updates in the core module to improve stability.

2024-02-14 - 3.0.6

Core maintenance and updates.

- Implemented minor fixes in the core module.

2023-07-21 - 3.0.5

Addressed core module adjustments.

- Patched core module to rectify issues.

2023-07-20 - 3.0.4

Further improvements to core functionality.

- Additional fixes applied to the core component.

2023-07-11 to 2023-07-10 - 3.0.3

Organizational and structural changes.

- Transitioned to a new organizational scheme.

2023-01-09 - 3.0.2

Core module corrections.

- Resolved various issues within the core module.

2022-06-09 - 3.0.1

Continuous enhancements in core functionality.

- Continued bug fixes for core module efficiency.

2022-04-04 to 2022-04-02 - 3.0.0

Major release with significant updates.

2022-03-22 - 2.0.0

Significant breaking changes in core tech stack.

- BREAKING CHANGE: Transitioned core module to ECMAScript Modules (ESM).

2021-05-10 - 1.0.9

Caching improvements and optimization.

- Enhanced caching by properly respecting TTL across all cache levels.

2020-02-15 to 2020-02-05 - 1.0.6 to 1.0.1

Initial series of core module fixes and updates.

- Persistent efforts to stabilize and improve core functionalities.

Revision #2
