readme.md for @push.rocks/smartdebug

debug the smart way

Availability

[npm](#) [git](#) [git docs](#)

Status for master

[build status](#) [coverage report](#) [npm downloads per month](#) [bitHound Dependencies](#) [bitHound Code Known Vulnerabilities](#) [TypeScript](#) [node](#) [JavaScript Style Guide](#)

Usage

Use TypeScript for best in class intellisense.

```
import * as smartdebug from '@pushrocks/smartdebug';

smartdebug.log('a cool message'); // won't log
smartdebug.enableDebugging();
smartdebug.log('another cool message'); // this message will log

if (smartdebug.debugEnabled) {
  console.log('Hi there!'); // will also log since debugging is enabled
}
```

For further information read the linked docs at the top of this README.
