

# changelog.md for @push.rocks/smartnftables

## 2026-03-30 - 1.1.0 - feat(nft)

add source IP filtering for DNAT rules and expose table existence checks

- Adds an optional sourceIP field to NAT rule definitions to restrict DNAT rules to matching source addresses or subnets.
- Updates DNAT rule generation to include an ip saddr match when sourceIP is provided.
- Introduces a tableExists() manager method to detect whether the managed nftables table is still present in the kernel.

## 2026-03-26 - 1.0.1 - fix(repo)

no changes to commit

## 2026-03-26 - 1.0.0 - project

Initial release.

- Project initialized with first commit.
