

# changelog.md for @serve.zone/coreflow

## 2024-12-29 - 1.1.0 - feat(.gitea/workflows)

Add GitHub Actions workflows for Docker build and test

- Added `.gitea/workflows/docker_nottags.yaml` for handling Docker builds on non-tagged commits.
- Added `.gitea/workflows/docker_tags.yaml` for handling Docker builds on tagged commits.
- Both workflows include steps for security audits, testing, and build preparation.

## 2024-12-29 - 1.0.135 - fix(core)

Fix image retrieval and service deployment process for workload services

- Updated the handling of internal and external registry images when provisioning workload services.
- Refined the image pulling logic to accommodate both internal and external sources.
- Ensured proper secret management during service deployment.
- Corrected and optimized key function parameters and API calls for clarity and functionality.

## 2024-12-20 - 1.0.134 - fix(core)

Updated dependencies and refactored ClusterManager and CloudlyConnector for improved Docker management.

- Updated `@push.rocks/tswatch` and `@push.rocks/tapbundle` to latest versions in `devDependencies`.
- Refactored `ClusterManager` to remove unused subscriptions and improve network and service management.
- Refactored `CloudlyConnector` to use `CloudlyApiClient` for improved cloud configuration management.
- Added logging for network and Docker service configurations.

## 2024-11-18 - 1.0.133 - fix(dockerfile)

Update Docker base images to use `code.foss.global` instead of `registry.gitlab.com`

- Updated Docker base images to use `code.foss.global` instead of `registry.gitlab.com`.
- Changed the global installation path for `@serve.zone/healthy` to `@servezone/healthy` in Dockerfile.
- Adjusted logging system from `lolo-log` to `smartlog` for enhanced log context output.

## 2024-05-09 - 1.0.130 to 1.0.132 - Maintenance Release

Regular updates and maintenance tasks.

- Fixed core functionality issues in versions 1.0.130 and 1.0.131.
