changelog.md for @uptime.link/catalog_admin

2025-12-27 - 1.3.0 - feat(admin-ui)

introduce view layer and refactor admin UI to use view components, consolidate demos, and update interfaces

- Added a new views/ layer with view components: upladmin-dashboard-view, upladmin-monitors-view, upladmin-incidents-view, upladmin-config-view and exported them from `ts_web/views/index.ts`
- Refactored upladmin-app to use the new view components (updated menu routes/content to view tags)
- Removed multiple demo page files under `ts_web/pages` (consolidated demo surface into the view-based app)
- Updated upladmin-statuspage-config: changed activeSection to a property, removed the side navigation markup/CSS and simplified layout to be view-driven
- Reworked `ts_web/interfaces` to re-export core types from `@uptime.link/interfaces` and added UI-specific interfaces and form types
- Bumped dependency `@uptime.link/interfaces` to `^2.1.0` in `package.json`

2025-12-26 - 1.2.0 - feat(elements)

add upladmin-option-card component and migrate option/status UIs to use it; refactor monitor form multitoggle subscriptions and event handling; improve theme color handling and dark-mode styles; add demos, Playwright snapshots, and migration plan

- Add new upladmin-option-card web component (implementation, index export, and demo).
- Replace inline option/status card markup with in `incident-form` and `incident-update`.
- Refactor upladmin-monitor-form: subscribe/unsubscribe multitoggle change subjects, handle lifecycle (`firstUpdated/disconnected`), and adjust event handlers (`@newValue/@change` usage).
- Swap hardcoded color tokens for `cssManager.bdTheme` for better light/dark theming; add dark-mode media tweak for filter select.

- Add Playwright snapshot images (.playwright-mcp) and a detailed readme.plan.md describing interface migration tasks.

2025-12-24 - 1.1.0 - feat(monitor)

add extended monitor statuses, check configuration, status overrides/paused indicators, and incident update templates

- Extend TStatusType with new statuses: initializing, error, paused.
- Add statusMode, manualStatus, paused, checkType, checkConfig and intervalMs to service and monitor interfaces.
- Update monitor list UI to show manual-override and paused indicators, new status badges, and include new statuses in status filter.
- Add quick templates to incident update form that prefill both status and message; update applyTemplate accordingly.
- Enhance monitor form to support checkType/ICheckConfig, statusMode selection, pause flag, interval options and additional validation (domain & PageRank search term).
- Add styles and icons for new statuses and status indicator badges.

2025-12-24 - 1.0.3 - fix(catalog_admin)

no changes detected, no release required

- No files changed in this diff
- No code, tests, or documentation modifications detected
- No version bump recommended

2025-12-24 - 1.0.2 - fix(gitignore)

ignore distribution/build output directories (dist*)

- Added 'dist*/' to .gitignore to prevent committing build artifacts and local distribution folders

2025-12-24 - 1.0.1 - fix(release)

no changes detected

- No files changed in the provided git diff
- package.json version is 1.0.0; no release necessary

2025-12-24 - 1.0.0 - initial release

Initial project commit establishing the repository and baseline files.

- Initial commit that initializes the project
- Added baseline project structure and files
- Set project version to 1.0.0
